Conservation Geography

Week 10 Assignment Solutions (2026)

1 When forests are cleared, carbon may be released not only from removed wood but also from

(a) ocean sediments

(b) glaciers

(c) **soil organic matter**

(d) desert sand

2 Hydrogen for nuclear fusion comes under the category of

(a) potential resources

(b) actual resources

(c) reserve resources

(d) **stock resources**

3 In the Rondonia rainforest example, road construction mainly contributed to forest loss by

(a) increasing rainfall in cleared patches

(b) **allowing easier human access into forest areas**

(c) preventing agricultural plots from forming

(d) converting cropland back into forest

4 Oil that has not been drilled can be categorised under

(a) **potential resources**

(b) actual resources

(c) reserve resources

(d) stock resources

5 Although cropland uses a smaller share of agricultural land than livestock, it contributes more to

(a) **global calorie supply**

(b) mineral extraction

(c) groundwater recharge

(d) built-up land expansion

6 Low concentration ores come in the category of

(a) potential resources

(b) actual resources

(c) **reserve resources**

(d) stock resources

7 “those resources that have been surveyed but we lack the technology to use them” is a definition of

(a) potential resources

(b) actual resources

(c) reserve resources

(d) **stock resources**

8 Which of these is the largest source of nitrogen oxides in the atmosphere?

(a) electricity generation

(b) **mobile sources**

(c) industrial processes

(d) waste disposal

9 Timber from forests that is being harvested can be categorised under

(a) potential resources

(b) **actual resources**

(c) reserve resources

(d) stock resources

10 Which of these is the largest source of ammonia (NH3) in the atmosphere?

(a) **animal manure**

(b) mineral fertiliser

(c) crops and their decomposition

(d) human waste
