Conservation Geography

Week 2 Assignment Solutions (2026)

1. Mount Fuji is an example of

(a) Shield volcano

(b) **Stratovolcano**

(c) Caldera

(d) Flood basalt province

2. The main source of magma is

(a) Crust

(b) **Mantle**

(c) Outer core

(d) Inner core

3. Which of these is not a method of absolute dating?

(a) radioisotope dating

(b) thermoluminescence dating

(c) **inclusion study**

(d) fission track dating

4. What are planetesimals?

(a) Fully formed gas giants

(b) Fragments of continental crust

(c) **Small bodies formed from gas and dust that can accrete into planets**

(d) Layers of volcanic ash within a mountain

5. Hawaiian volcanoes are an example of

(a) **Shield volcano**

(b) Stratovolcano

(c) Caldera

(d) Flood basalt province

6. Which of these is true about P waves?

(a) **They are longitudinal in nature**

(b) They are transverse in nature

(c) They cannot move through gases

(d) They cannot move through liquids

7. Assemblage of fossils are unique to the time that they lived in, and so can be used to age rocks across a wide geographic distribution. This is known as

(a) **Principle of fossil succession**

(b) Principle of original horizontality

(c) Principle of superposition

(d) Principle of cross-cutting relationships

8. Which set contains only terrestrial planets?

(a) Jupiter, Saturn, Uranus, Neptune

(b) Earth, Jupiter, Mars, Saturn

(c) Mercury, Venus, Uranus, Neptune

(d) **Mercury, Venus, Earth, Mars**

9. Within a depositional basin, strata are laterally continuous in all directions till the edge of the basin. This is known as

(a) Principle of superposition

(b) Principle of original horizontality

(c) **Principle of lateral continuity**

(d) Principle of inclusions

10. Deccan traps are an example of

(a) Shield volcano

(b) Stratovolcano

(c) Caldera

(d) **Flood basalt province**
