Conservation Geography

Week 3 Assignment Solutions (2026)

1 Mudrock is an example of

(a) **siliciclastic rock**

(b) carbonate rock

(c) evaporite rock

(d) phosphatic rock

2 Carbonation is an example of

(a) **chemical weathering**

(b) physical weathering

(c) biological weathering

(d) none of the above

3 “green or black coloured inosilicate minerals forming prism or needle-like crystals” is a description of

(a) **amphiboles**

(b) feldspar

(c) mica

(d) pyroxene

4 Hydrolysis is an example of

(a) **chemical weathering**

(b) physical weathering

(c) biological weathering

(d) none of the above

5 Which of these is an example of exogenic process?

(a) volcanism

(b) earthquake

(c) plate tectonics

(d) **deposition**

6 Which statement best explains why streak is often more useful than surface colour for mineral identification?

(a) Streak measures the density of the mineral

(b) Surface colour never changes in minerals

(c) **Streak shows the colour of the powdered mineral and may reduce the effect of minor impurities**

(d) Streak reveals the age of the mineral

7 Which factor is listed as an independent control over landform development?

(a) Mineral streak

(b) Crystal habit

(c) Knife-blade hardness

(d) **Stability of sea level**

8 Sandstone is an example of

(a) **siliciclastic rock**

(b) carbonate rock

(c) evaporite rock

(d) phosphatic rock

9 “tendency to break in given directions producing relatively plane surfaces” is known as

(a) **cleavage**

(b) fracture

(c) lustre

(d) streak

10 Slow cooling of magma results in

(a) smooth grained sedimentary rocks

(b) coarse grained sedimentary rocks

(c) smooth grained igneous rocks

(d) **coarse grained igneous rocks**
