Conservation Geography

Week 5 Assignment Solutions (2026)

1 What type of sediment is commonly found over abyssal plains?

(a) Coral fragments and gravel

(b) Basalt blocks and volcanic ash

(c) Sand and large pebbles

(d) **Clay and silt**

2 Which of these is the largest habitat on the Earth?

(a) continental shelf

(b) continental slope

(c) guyot

(d) **abyssal plain**

3 Which of these are the largest mountain ranges on Earth?

(a) oceanic deep / trench

(b) **mid-oceanic ridge**

(c) seamount

(d) atoll

4 Which factor helps explain why continental shelves are often highly productive?

(a) They are the deepest parts of the ocean floor

(b) They are completely isolated from runoff

(c) **They receive both light and nutrients**

(d) They lack sediments and organisms

5 What is tidal range?

(a) The horizontal movement of water parallel to the beach

(b) **The difference between sea level at high tide and low tide**

(c) The speed at which waves approach the coast

(d) The movement of cold water from deep ocean layers

6 Which process converts ice and snow directly into water vapour?

(a) Condensation

(b) Precipitation

(c) Snowmelt

(d) **Sublimation**

7 Which group of factors affects the density of ocean water with depth?

(a) Runoff, tides and beach slope

(b) **Hydrostatic pressure, salinity and temperature**

(c) Wind speed, wave height and latitude only

(d) Sediment size, coral growth and river mouths

8 “deep valleys, often cutting across continental shelves and slopes” is a description of

(a) oceanic deep / trench

(b) mid-oceanic ridge

(c) guyot

(d) **submarine canyon**

9 Continental shelf has a gradient of

(a) **0-1 degree**

(b) 1-2 degree

(c) 2-5 degree

(d) 5-10 degree

10 Equal salinity curves are called

(a) isopycnal curves

(b) **isohaline curves**

(c) isotherm curves

(d) isobuoyant curves
