Conservation Geography

Week 6 Assignment Solutions (2026)

1 The Western Ghats act as a water divide because

(a) they prevent all rivers from reaching the sea

(b) **water on opposite sides flows in different directions**

(c) they cause all rivers to become seasonal

(d) they convert rivers into lakes

2 A river network that follows the structure and slope of the land is best described as

(a) discordant

(b) antecedent

(c) **accordant**

(d) centripetal

3 A tree-like river network in which smaller streams join a main channel is called

(a) trellis drainage

(b) **dendritic drainage**

(c) centripetal drainage

(d) rectangular drainage

4 A river system that does not match the present structure and relief of the landscape is called

(a) **discordant drainage**

(b) dendritic drainage

(c) radial drainage

(d) parallel drainage

5 The Himalayas are primarily comprised of

(a) **sedimentary rocks**

(b) igneous rocks

(c) metamorphic rocks

(d) b and c

6 Which pair of rivers is described as flowing westwards into the Arabian Sea?

(a) Ganga and Yamuna

(b) Mahanadi and Godavari

(c) **Narmada and Tapi**

(d) Krishna and Kaveri

7 Which of these are factors determining the climate of India?

(a) distance from the sea

(b) altitude

(c) relief

(d) **all of these**

8 Peninsular rivers usually have fixed courses mainly because

(a) they flow through newly formed mountains

(b) they carry very high sediment loads

(c) they are controlled only by monsoon winds

(d) **their courses are cut into older, harder rocks**

9 In Koeppen classification, which is polar frost temperature?

(a) c

(b) d

(c) **F**

(d) T

10 Which of these are factors determining the climate of India?

(a) the latitudinal extent

(b) the Himalayas forming a climatic divide

(c) distribution of land and water

(d) **all of these**
